

# Installation of The Bubbler™

Mount the cabinet to the wall.

Connect compressor to top of generator as shown with 1/2" black tube.

Plug compressor power cord into bottom of cabinet.

Use 1/2" clear tube to connect generator to diffuser stones. If there is a divider or 2 separate pits, use one diffuser in each. Diffusers should be as near the bottom of the pit as possible and both at same level. For best results place diffusers in water flow.

Set the timer in the cabinet for time of day and hours you want the Bubbler to run. The timer will control the Bubbler when the power switch is set to "Auto".

Plug the power cord into a 120 VAC outlet and turn the power switch to "Auto" or "Manual".
